

Vault Fork — Removal Spec

Feature removals for the StakTrakr → Vault fork, based on Precious_Metals_Portfolio.xlsx

This lists only what gets **removed**. Everything not listed here is kept as-is. Serial/certificate fields are kept (Royal Mint serialised bars/coins). The base UI, layout and component structure stay the same — each section below notes how the UI needs to flex once the field is gone, rather than being redesigned.

1. Grading & Certification

Grading scale + authority

Remove: Grade dropdown (AG–MS70 / PF60–PF70), Authority dropdown (PCGS/NGC/ANACS/ICG).

UI accommodation: Delete the two dropdowns and their row in the Add Item modal. Collapse the row height so the form doesn't leave a gap — the Serial/Cert field below moves up into its place.

Numista / PCGS catalog lookup

Remove: Numista # field, PCGS # field + lookup link, Numista search settings, PCGS Item Found modal, Numista Results modal, catalog API call log, Import Numista option.

UI accommodation: Remove the lookup icon/button from the Add Item modal header. The Cert # field stays but becomes a plain text input with no auto-fill trigger attached.

2. Catalog & Descriptive Metadata

Physical/catalog detail block

Remove: Country, Denomination, Composition, Shape, Diameter, Length, Width, Thickness, Orientation, Technique, Mintage, Rarity Index, KM Reference.

UI accommodation: Remove the whole "Catalog Data" collapsible section from the Add Item modal. Sort options for Mintage/Rarity are removed from the table's sort menu too.

Commemorative / description fields

Remove: Commemorative toggle + description, Obverse Description, Reverse Description, Edge Description.

UI accommodation: Remove this sub-section entirely; the Notes field remains as the single free-text field.

Capsule tracking

Remove: Capsule toggle and Capsule Notes field.

UI accommodation: Remove the row; no replacement needed.

3. Constitutional Silver & Goldback

Constitutional silver mode

Remove: By-denomination / by-face-value calculator, coin-count and face-value inputs, junk-silver melt estimate line.

UI accommodation: Remove "Constitutional" from the Type dropdown, and remove the conditional form block that appears when it's selected.

Goldback support

Remove: Goldback/Silverback unit options, denomination presets (½–100 GB), Goldback pricing engine (API/spot-estimate/manual modes, spot modifier), Goldback Price History modal, Goldback line in Market Settings ticker filter.

UI accommodation: Remove "Goldback"/"Silverback" from the Unit dropdown and from the Metal Order/ticker filter list. Weight unit dropdown shrinks to oz/g/kg/lb only.

4. Cloud Sync & Encrypted Backup

Dropbox cloud sync

Remove: Dropbox connect flow, auto-sync toggle, Sync Now, sync history, Dropbox Settings modal, placeholder cards for Google Drive/OneDrive/pCloud/Box.

UI accommodation: Remove the entire Cloud tab from Settings. GitHub Pages export/CSV already covers your backup path.

Encrypted vault backup

Remove: AES-256-GCM .stvault export/import, vault password prompts, Restore Preview / Review Changes modals.

UI accommodation: Remove "Encrypted Backup" from the Inventory export/import menu. Plain ZIP/CSV/JSON export stays.

5. Multi-Currency

Currency switcher

Remove: Display currency selector, Open Exchange Rates integration, 24h price-comparison basis picker.

UI accommodation: Settings → Currency panel collapses to a single fixed GBP label (no dropdown). Spot price cards keep their layout, just always render in £.

6. Bulk Editor & Full Change Log

Bulk Editor (beta)

Remove: Multi-select batch edit tool and its modal.

UI accommodation: Remove the "Open Bulk Editor" button from Settings → Inventory. Not needed for a 2-person, low-volume list.

Granular activity log

Remove: Catalog API history tab, Cloud log tab (kept only if Dropbox is removed — it is), per-field undo log grid.

UI accommodation: Simplify the Activity Log modal to two tabs: Changelog and Spot Price history. Remove the Catalogs/Cloud tabs from the log's tab bar.

7. Other Removals

PDF export report

Remove: "Export PDF" printable report generator.

UI accommodation: Remove the PDF option from the Export menu; CSV/JSON/ZIP remain.

Breakdown-by-location chart

Remove: "Breakdown by Purchase Location" chart modal (kept: "Breakdown by Type" stays if useful, otherwise fold into per-owner summary).

UI accommodation: Remove one chart tile from the summary section; grid reflows to fill the gap, no layout rebuild needed.

Kept, for reference: serial/cert number field (Royal Mint serialised items), Type, Metal, Name, Year, Purity, Weight (oz/g/kg/lb), Quantity, Purchase Date, Purchase Price (each/lot), Payment Method, Purchase/Storage Location, Retail Price, Notes, Tags, Images, live spot prices, item table + sort/filter, disposal tracking, CSV/JSON/ZIP import-export, Owner field (new, replaces the two-sheet Louis/Dylan split), Digital Gold as a metal type (new), Order ID field (new).
